

Reduce Exposure by Avoiding Switch Contact

The COVID-19 pandemic has changed our lives, affecting where we learn, work, and play. The following are tips for reducing how often you touch Acuity Brands lighting controls wall switches during COVID-19 and beyond.

Methods to Reduce Contact with Wall Switches

The below are ways that our technology helps you to reduce or eliminate contact with devices.

- **Mobile App Control:**
 - Use the *myPersonify* app to eliminate direct contact with the nLight Unitouch™ wall station while still being able to control lighting and scenes from the convenience of your smartphone
- **Occupancy Response:**
 - Automatically turn lights on when occupied, bringing light levels to full bright or to a reduced state in accordance with local energy codes
 - Turn lights off automatically when occupants exit, saving energy and reducing exposure to germs
- **Third-Party Device Integration:**
 - Expand your wall station options by bringing third party switch options onto the nLight network through dry contact input
 - Leverage BACnet or RESTful API to control nLight devices from a third party system

Acuity Brands is committed to working with our customers to provide guidance on the most optimal way to interact with our lighting control solutions. Should you have any additional questions on the capabilities outlined above, please contact us at 1-800-535-2465.
